

The New Standard for Scaffold Plank

NexgenPlank is an innovative fiberglass scaffold plank designed for, and compatible with, existing frame and systems scaffolding. It's a lightweight and durable alternative to the current scaffolding platforms.

Environmentally Friendly

NexGenPlank's pultruded FRP components produce fewer air and water emissions consume less energy and emit less greenhouse gas, leading to both a reduced environmental impact and a lower carbon footprint.

General Product Information

Product Features

- **Water Proof.** Storage or exposure won't allow water to penetrate the plank.
- **Non-Skid Surface.** Coated, non-skid surface.
- **Non-Conductive.** The danger of electrocution is eliminated because of its high capacity.
- **Fire Retardant.** Self-extinguishing.
- **Corrosion-Resistant.** Does not warp, rot, or decay from exposure to moisture, water, and chemicals.
- **UVA/UVB Resistant.** Does not absorb UVA or UVB rays from long exposure to the sun.
- **Environmental Resistance.** Unaffected by insect attacks, like marine borers and termites, as well as rust, fungi, and other factors.
- **Welding Slag Resistant.** Capable of handling welding applications without having to replace plank after.
- **Consistent Deflection.** Consistent weight and deflection from plank to plank decreases the chance of accidents.
- **Impact Resistant.** Will not permanently deform under impact.
- **Increased Strength.** Colder applications actually increase the strength from its already high flexural strength.

Product Benefits

- Environmentally Friendly
- OSHA / ANSI / CSA Compliant
- 3rd Party Tested
- Low Maintenance
- Long Life Span
- Increased Worker Productivity
- Less Inspection Time
- Decreased Storage Costs
- International Shipping
- Customizable (size, color, logo)

Product Specifications

- 1.5' x 9.5' nominal dimensions
- 50 psf @ 10' spans or less
- 75 psf @ 7' spans or less
- 2.9 lbs per LF
- Pultruded Fiberglass Product

Patent No.: US 8,715,55 B2
